This is a graduate course on development economics with a focus on EU economic relations with the Global South. It is offered under the auspices of the Jean Monnet Chair in External Economic Relations of the European Union held by Prof. Grigoriadis and his team. Within the context of EU policy decision-making, the first part of the course will concentrate on key models and approaches in development economics such as new growth models, inequality and poverty, population economics and rural-urban transitions, the role of resources such as land and labor and the impact of financial development through the lenses of credit markets and insurance modeling. Furthermore, we discuss theoretical and empirical topics in EU development policy with a strong focus on the political economy of foreign aid and international trade. Students are expected to become conversant with the analytical tools and theoretical discussions presented in the literature and related to EU development and trade policies. The role of the European as a global trade and development actor is central in the learning process. The course grade is defined by a final exam/research paper (depending on degree program pursued) in the end of the semester.

Active Participation: collective presentation (12 slides per person, 15 minutes per person) in the last five weeks of the semester.

Regular Participation: 75% attendance of seminars and lectures.

Grade:

Final Exam (Wiwiss) or Paper (OEI/PolSoz).
